## BACKGROUND:

The company was founded in 2008 under AISA (License#D-28885). Today, Turbo is a full-service supplier of Generators and Heavy Machinery both for sale and rental. Turbo Group of Companies (TGC) is a nationwide supplier of new, refurbished and used heavy equipment and machinery for construction, quarry and mining in Afghanistan.

From single machines/equipment to complete fleets, Turbo is able to meet all your heavy machinery requirements, including service, maintenance, spare parts, training, and consultancy.

TGC emerges as a standardized company both in its services as its management of work

## WHAT ARE WE OFFERING?

Turbo Group of Companies maintains a qualified team of engineers, mechanics and Security that offer nationwide and international service

### Power Generators/Maintenance and Servicing

TGC during its first few years evolved as a company gained the trust of the most with qualified team of officers and engineering staff, we offer ***nationwide service and installation*** of all types and makes of diesel and gas powered generators in the range of 5kW to 2MW. We also provide an emergency call out service 24 hours and 365 days a year for diagnosis and repair.

At the TGC; we offer ***Generators sets for sale and rental*** ranging from 10kva all the way to 2200kva. We also maintain proper customer relations in order to provide troubleshooting and fault correction services. Service Warranty for a period of 1-year and 2-year is applicable to different brands of machinery is provided.

Inside TGC, we own a fully equipped maintenance workshop that caters machine servicing. Our workshop is located in Kabul and many other major cities in Afghanistan. The workshop has facilities and skilled personnel for complete mechanical overhaul, welding, fabrication, sand blasting, painting, service, and maintenance and testing, and is fully equipped for carrying out inspections. This gives us the capability to bring used heavy machinery up to the standards you require, and is a reassurance that it is reliable and able to do the job it is intended for. Plans to double the size of the workshop facilities have been approved, and work will start soon. In consistency with our commitment to customer satisfaction our efforts are well focused on providing High quality maintenance team to meet this commitment.

We have over 24 dedicated & well trained maintenance personnel always ready to respond to emergency calls.

Below is a depiction of workflow of our site visit safety and maintenance check:

### Periodic Maintenance Checks:

- General Inspection
- Lubrication Service
- Cooling System Service
- Fuel System Service
- Air Intake Service
- Servicing and Testing Starting Batteries
- Regular Generator Engine Exercise
- Maintenance Checklist is filled- signed by the client and the attending engineer (a copy for client is provided)

### Emergency Call out Maintenance and repair:

## **Safety – A priority**

Safety at TGC is a priority. We check and cross check for safety faults, and provide corrective measures. When the machinery is supplied or brought in for maintenance or for any site visit, a preventive maintenance check is run by the attending service engineer. Our engineer needs to be alert for mechanical problems that could create unsafe or hazardous conditions and implement corrective measures to acquire customer safety.
